

Requirements for 'Booking details'.	
Payment can be made by credit card. The following details are required: - Card type - Visa or Mastercard; - Name on card - as printed on card - Card number - 16 digits, no spaces - Expiry date - mm/yy - CVC code - last 3 digits on the signature strip	
Having entered these details, the system will seek authorization for the payment. When this is received, a final confirmation message is displayed.	
The customer can choose to cancel or confirm. If confirmed, the booking is made and a confirmation email is sent to the customer's email address (as specified in their customer profile). If the payment authorization fails, an error message is displayed.	

Checklist				
#	Summary	Expected Result	Status	Comment
1	Fill in all required fields with valid Visa card data	The system should request payment authorization.	Not Run	need to clarify
2	Fill in all required fields with valid Mastercard card data	The system should request payment authorization.	Not Run	need to clarify
3	Fill in credit card fields via invalid data (e.g. symbols in CVC code)	The system should display validation error messages near fields.	Not Run	
4	Payment authorization is successfully received	Display the final confirmation message with confirm/cancel options	Not Run	
5	Payment authorization fails	Display an error message and offer retry or change card options.	Not Run	need to clarify
6	Check content of confirmation message	Information about the facility and date should match user selection.	Not Run	need to clarify
7	Confirm the booking	Confirmation email is sent, time slot is booked and unavailable to others	Not Run	need to clarify
8	Cancel the booking	Time slot remains available, user sees cancellation message	Not Run	need to clarify
9	Confirm that a booked time slot becomes unavailable for booking to other users.	The time slot booked by the current user is no longer available in the facility list for any other user.	Not Run	

Questions to the requirements		
#	Question	Describe
1	Need more information about UI view of the 'Payment details' page	- Location elements per page; - What buttons should be located per page?
2	From the requirements, it seems that the payment request occurs as soon as the user enters the data. Can the customer regulate the transition to the request, or the system should do it automatically right away?	There may be a problem here that the user will not have time to review their data, check it. In addition, the requirement does not specify whether this window will be displayed when the data is incorrect/invalid.
3	How will the seek authorizationn for payments request appear?	Can it be pop-up or new page or etc.?
4	Need more details about how the seek authorization for payment will be implemented	Should the system call a third-party service, or should this be built by developers? How can the system obtain authorization?
5	How should the system respond if payment authorization is not received?	Display a warning message or smth like this?
6	What should be in the confirmation message	There can be only two buttons with the main text such as confirm or cancel the reservation or there can be all the information about the date, time, additional information about the facility with buttons
7	Is payment taken from the customer's card when confirming the booking?	If not, is there a check to see if there are enough funds on the card for payment, or if it can be used to make a payment at all, or is it possible that part of the funds is being withdrawn as a prepayment?
8	Could there be a situation where the email field is empty or not confirmed?	You need to make sure that the email field is required when registering.
9	What should contain in the confirmation email?	Only information that the user has booked a service, or all details about the time and price of services, etc.
10	What happens after a user confirms a booking on the website?	Will the user go to the home page or stay on the payment page?
11	What error message is displayed after the cancellation booking	What text contains? Have any buttons, like a hint for user what he/she should to do after cancellation.
