Questions to the requirements (Q)		
#	Question	Describe
(Q) Select the booking period for the facility		
1	Where exactly are the time slots shown?	On each facility card? On a separate screen?
2	How is availability/unavailability visually shown?	*The requirement is unclear.* Should the color, status, or clickable time slots indicate the facility's availability, or is a different indicator expected?
3	The requirement suggests that any available facility can be booked at any time the user wants.	*The requirement is unclear.* Because, even if a facility is available for booking in general, not all time slots requested by the user may actually be available.
4	Can a facility be marked as "Available" if only some slots are available?	Or is status calculated dynamically based on slots?
5	Can multiple slots be selected at once?	If so, how are they confirmed?
6	What happens if two users click the same time slot simultaneously?	Who gets the slot first?
(Q) Confirmation message		
7	What info should the confirmation message include?	What text should appear in the confirmation message? (Facility name, time, price, location?)
8	Is the confirmation message modal or page-based?	Is it a pop-up, or does it take over the screen?
9	What happens to the selected time period after clicking the 'Continue' button in the confirmation message?	Does the selected time period become pre-selected?Can the other user select it?
10	After canceling a booking, should the filters reset all settings or leave them as they were?	Will the user be returned to the facilities page with the settings already set or to the list of all establishments?
